

CONTENT AREA: Mathematics

GRADE LEVEL: 7

Standard Descriptions:

In Grade 7, instructional time should focus on four critical areas: (1) developing understanding of and applying proportional relationships; (2) developing understanding of operations with rational numbers and working with expressions and linear equations; (3) solving problems involving scale drawings and informal geometric constructions, and working with two- and three-dimensional shapes to solve problems involving area, surface area and volume; and (4) drawing inferences about populations based on samples.

Blue: Standards 1 through 3 (TEST WINDOW 1)

Yellow: Standards 4 through 6 (TEST WINDOW 2)

(1) Students extend their understanding of ratios and develop understanding of proportionality to solve single- and multi-step problems. Students use their understanding of ratios and proportionality to solve a wide variety of percent problems, including those involving discounts, interest, taxes, tips and percent increase or decrease. Students solve problems about scale drawings by relating corresponding lengths between the objects or by using the fact that relationships of lengths within an object are preserved in similar objects. Students graph proportional relationships and understand the unit rate informally as a measure of the steepness of the related line, called the slope. They distinguish proportional relationships from other relationships.

(2) Students develop a unified understanding of number, recognizing fractions, decimals (that have a finite or a repeating decimal representation), and percents as different representations of rational numbers. Students extend addition, subtraction, multiplication, and division to all rational numbers, maintaining the properties of operations and the relationships between addition and subtraction, and multiplication and division. By applying these properties, and by viewing negative numbers in terms of everyday contexts (e.g., amounts owed or temperatures below zero), students explain and interpret the rules for adding, subtracting, multiplying, and dividing with negative numbers. They use the arithmetic of rational numbers as they formulate expressions and equations in one variable and use these equations to solve problems.

(3) Students continue their work with area from Grade 6, solving problems involving the area and circumference of a circle and surface area of three dimensional objects. In preparation for work on congruence and similarity in Grade 8 they reason

about relationships among two-dimensional figures using scale drawings and informal geometric constructions, and they gain familiarity with the relationships between angles formed by intersecting lines. Students work with three-dimensional figures, relating them to two dimensional figures by examining cross-sections. They solve real-world and mathematical problems involving area, surface area, and volume of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes and right prisms.

(4) Students build on their previous work with single data distributions to compare two data distributions and address questions about differences between populations. They begin informal work with random sampling to generate data sets and learn about the importance of representative samples for drawing inferences.

Ratios and Proportional Relationships (RPR)	Analyze proportional relationships and use them to solve real-world and mathematical problems.
The Number System (NS)	Apply and extend previous understandings of operations with fractions to add, subtract, multiply, and divide rational numbers.
Expressions and Equations (EE)	Use properties of operations to generate equivalent expressions.
	Solve real-life and mathematical problems using numerical and algebraic expressions and equations.
Geometry (G)	Draw, construct and describe geometrical figures and describe the relationships between them.

	Solve real-life and mathematical problems involving angle measure, area, surface area, and volume.
Statistics and Probability (SP)	Use random sampling to draw inferences about a population.
	Draw informal comparative inferences about two populations.
	Investigate chance processes and develop, use, and evaluate probability models.

Grade Level/ Content Area	Alternate K-PREP Statement Aligned KAS Standards	KAS Standard
Grade 7 Mathematics	(M-7.1) Use proportional relationships to solve multi-step ratio and percent problems.	KAS (7.RPR.3) Use proportional relationships to solve multi-step ratio and percent problems. Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.

	<p>(M-7.2)</p> <p>Solve real-life and mathematical problems posed with positive and negative rational numbers, (whole numbers, fractions and decimals) converting between forms as appropriate.</p>	<p>KAS (7.EE.3)</p> <p>Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. For example: If a woman making \$25 per hour gets a 10% raise, she will make an additional $\frac{1}{10}$ of her salary per hour, or \$2.50, for a new salary of \$27.50.</p>
	<p>(M-7.3)</p> <p>Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers on a horizontal or vertical number line diagram.</p>	<p>KAS (7.NS.1d)</p> <p>Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. d. Apply properties of operations as strategies to add and subtract rational numbers.</p>
	<p>(M-7.4)</p> <p>Solve real-world and mathematical problems involving the four operations with rational numbers.</p>	<p>KAS (7.NS.3)</p> <p>Solve real-world and mathematical problems involving the four operations with rational numbers.</p>
	<p>(M-7.5)</p> <p>Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas, (triangles and quadrilaterals) from a scale drawing.</p>	<p>KAS (7.G.1)</p> <p>Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.</p>
	<p>(M-7.6)</p> <p>Solve real-world or mathematical problems involving volume and surface area of three dimensional objects</p>	<p>KAS (7.G.6)</p> <p>Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles,</p>

	composed of cubes and right prisms.	quadrilaterals, polygons, cubes, and right prisms.
