Health Services Reference Guide

Kentucky Department of Education
2018
Purpose
The purpose of the Kentucky Health Services Reference Guide (HSRG) is to assist schools in identifying and providing an educational environment where physical and mental barriers to learning have been reduced so that the student may achieve their academic potential.

The HSRG may be downloaded from the Kentucky Department of Education Health Services webpage and placed in a manual and kept in every school health office. KRS 156.501(1) (a) (3) requires that each school district to keep a copy or a link to a copy of the HSRG in the school library.

Information and resources included in the HSRG will be updated as federal or state laws or regulations require. It is the responsibility of the local school district to keep their health services policies, procedures and forms up to date per the state and federal laws and regulation found in the HSRG guidelines.

Accessing information in this guide:
To access a topic of interest, click on the major heading. Each page lists best practice resources from national agencies, nursing organizations and Kentucky specific state agencies. If further assistance is needed, please contact the Kentucky Department of Education School Health Services Program.

Coordinated School Health
Schools play a critical role in promoting the health and safety of young people and helping them establish lifelong healthy behavior patterns. Research shows a link between the health outcomes of young people and their academic success. To have the most positive impact on the health outcomes of young people, government agencies, community organizations, schools, and other community members must work together through a collaborative and comprehensive approach. Further details on the Whole School, Whole Child and Whole Community (WSCC) expanded model and Kentucky’s Coordinated School Health (CSH) program is provided in this section.

Health Conditions
Many children with chronic health conditions or illnesses attend Kentucky public schools. These health conditions may create barriers to learning and limit a child’s educational progress. KRS 156.502 requires school districts to make “any necessary arrangement for the provision of the health service to the student in order to prevent a loss of a health service from affecting the student’s attendance or program participation.” This section includes information on allergies, anaphylaxis, asthma, diabetes, epilepsy and seizures, health care plans and other related topics.

Health Services Program Requirements, Roles and Responsibilities
KRS 156.502 not only defines school health services but also describes who may train, delegate and administer school health services. As the primary health contact in the school setting, school health services personnel address the physical, mental, emotional and social health needs of students. Models for the delivery of a school health services program, as well as Kentucky Nursing laws, regulations and advisory opinion statements on the provision of school health services from the Kentucky Board of Nursing are included in this section.
Legal Issues
All school health services personnel, both licensed and unlicensed, should be aware of the federal and state laws and regulations related to school health services. This section includes links and information on Kentucky laws and regulation on student health services, student health records, FERPA and HIPAA laws, etc.

School Health Services Resources
School health services is one of the eight components of the Center for Disease Control’s (CDC) well-coordinated school health program. These services are designed ensure access or referral to primary health care services or both, foster appropriate use of primary health care services, prevent and control communicable disease and other health problems, provide emergency care for illness or injury, promote and provide optimum sanitary conditions for a safe school facility and school environment, and provide educational and counseling opportunities for promoting and maintaining individual, family, and community health. This section includes information on, bloodborne pathogen control, immunizations, environmental health, medication administration, emergency response, screenings and student safety.

Students with Special Health Care Needs
The Individuals with Disabilities Education Act (IDEA) and Section 504 of the Rehabilitation Act, the Americans with Disabilities Act (ADA) are federal laws that protect students with special healthcare and educational needs. Information about these laws, and recommended practices for the management of students with special healthcare and educational needs may be found in this section.

School Health Office Documentation
School enrollment required health documents, retention of school records, documentation of school health office visits and end of year data reporting are reviewed in this section.

- **Every Student Succeeds Act (ESSA)** Kentucky Department of Education’s plan for implementing ESSA in meeting the educational needs of students and for the development of high-quality instructional and support personnel. School Nurses are included as support personnel.

Health Services Program Requirements, Roles and Responsibilities

According to the Centers for Disease Control and Prevention (CDC), approximately 25% of school aged children have a chronic health condition. These chronic health conditions may include asthma, diabetes, seizure disorders, food allergies or other chronic health conditions that may require management during the school day or school sponsored event. **KRS 156.502** requires school health services to be provided to any student who needs health services in order to attend school or a school sponsored activity. School health services provided in the school setting can offer assistance in the management of the student’s chronic health condition and may also impact the student’s attendance and academic success.

Models for school health services are determined by the local school district. Examples of school models for the delivery of school health services include:

- Health services delivered by local school district employees. School district employed Registered Nurses and/or Advanced Practice Registered Nurse (APRN), Licensed Practical Nurse (LPN) and non-licensed trained school personnel are elements of this model. According to KRS 156.502, only an RN, APRN or MD may train and delegate selected school health procedures such as medication administration or the performance of a clinical procedure. The LPN and unlicensed school personnel must be supervised by the RN, APRN or MD.
- Health services contracted with the local health department. Some school districts contract with their local health department for the provision of school health services. The contract stipulates the services to be performed by local health department nurses.
School Based Health Centers are another type of school health services program. The school district contracts with a hospital or physician’s office to provide primary nursing care and may also include medical, dental and mental health services.

Each school district is responsible to develop and implement school health services policies and procedures describing how the health services will be provided and who is responsible for ensuring these services are administered. KDE has developed guidelines for contracting with outside agencies for the provision of school health services. These guidelines may be found here.

Management of School Health Services
The School District Health Coordinator works in cooperation with all school personnel, School Health Coordinator works in cooperation with all school personnel, the local board of education, the State Department of Education, the local health department, family resource and youth service centers, and parents in planning, promoting and implementing a school health services program per 702 KAR 1:160 Section 5. Requirements for this position are also found here.

In Kentucky, a school nurse may be either an Advanced Practice Registered (APRN), a Registered Nurse (RN) or Licensed Practical Nurse (LPN). Each title (APRN, RN or LPN) has specific training preparation according to their licensure. The different roles and responsibilities per nursing scope of practice may be found here. Each nurse must have a current KY license to provide health services in the school setting. (Licenses must be renewed no later than October 31, each school year).

The Kentucky Board of Nursing (KBN) regulates nursing practice, including school nursing practice. KBN has issued many Advisory Opinion Statements on school nursing practice, and the delegation and supervision required when delegation of nursing tasks to unlicensed school personnel. (AOS # 15 Roles of Nurses in the Supervision and Delegation of Nursing Tasks to Unlicensed Personnel and AOS # 30 School Nursing Practice). These Advisory Opinions are available on the KBN website under nursing practice.

RNs may administer medications and treatments only as prescribed by physicians (MD), physician assistants (PA), dentists and an advance practice registered nurse (APRN). Requests from parents to change a prescribed medication or treatment may not be accepted without the RN first contacting the prescribing healthcare provider.

KRS 314.011 (10) defines licensed practical nurses practice. By definition, a licensed practical nurse (LPN) practices under the direction of a registered nurse, physician, or dentist and is not licensed for independent nursing practice. KRS 156.502 (2) does not allow the LPN to delegate the performance of health services to unlicensed school personnel.

Supervision of the LPN does not require the supervisor to be physically present in the same building. However, the LPN may not practice without oversight of the nursing care provided to students.

Licensed Kentucky school nurses have the ultimate accountability for the management and provision of nursing care for children attending a Kentucky public school, including all
delegation decisions. Delegation is defined by the American Nurses’ Association as “the transfer of responsibility for the performance of an activity from one individual to another, while maintaining the accountability for the outcome.” School health services may be delegated to unlicensed school personnel according to related sections of KRS 156.502. KRS 156.502 describes who may delegate health service(s) (physician, APRN or RN), the training and the documentation of the training. The delegation and training is only valid for the current school year. (KRS 156.502 (2)

For school nurses, Kentucky Administrative Regulation (KAR) 201 KAR 20:400 Delegation of nursing tasks to non-licensed personnel, provides direction on how tasks may be delegated to a non-licensed individual by a licensed registered nurse (RN) or Advanced Practice Registered Nurse (APRN). The delegating school nurse will also be responsible for ongoing training and competency evaluations of the non-licensed personnel to safeguard the health and welfare of the students in their care. A KBN Decision Tree for Delegation to Unlicensed Assistive Personnel (including unlicensed school personnel) may be found on the KBN website.

Supervision is defined in 201 KAR 20:400 to mean “the provision of guidance by a qualified nurse for the accomplishment of a nursing task with periodic observation and evaluation of the performance of the task.” The evaluation should include validation that the nursing task has been performed according to established standards of practice. Even when school personnel may perform the task, whoever delegates the task will retain the responsibility for the outcome. Supervision of unlicensed school personnel does not require the delegating nurse to be present in the same building. However, the delegating school nurse should be available by phone for consultation.

Unlicensed School Personnel may be delegated some school health services responsibilities. However, according to KRS 156.502, only a licensed health professional (MD, APRN or RN) may determine whether the school employee is appropriate to be trained and delegated to perform a specific school health service. (KRS 156.502 defines school health services. The KBN Decision Tree for determining safe delegation of nursing tasks may be found on the KBN website under the nursing practice tab.)

When accepting the delegation to perform a specific school health service, the unlicensed school employee performs this function under the supervision of the delegating licensed health professional (KRS 156.502). Unlicensed school personnel should only accept a delegation that he/she knows is within his/her skill set or knowledge and should always contact the supervising school nurse if unclear about performing the delegated task. Unlicensed personnel have the responsibility to follow school district policies and procedures and report to the supervising school nurse if they have any reason to believe they have made an error in the administration of the health service. This should be reported as soon as possible.

KRS 156.502 requires written documentation of the school employee’s consent to the delegation of a specific school health service. The written documentation verifies that designated school employee has received training and demonstrated competency. The delegation, training and documentation are only valid during the current school year.
