Kentucky Schools Launch Statewide Cloud-based ERP System From Tyler Technologies

173 Kentucky school districts move to Tyler's cloud-based solution for its reliability, long-term cost savings and statewide disaster-recovery capabilities

DALLAS – April 3, 2013 – Tyler Technologies, Inc. (NYSE: TYL) has successfully moved 173 Kentucky school districts from traditional on-premise deployments of its Munis® enterprise resource planning (ERP) system to a hosted Munis solution. The process took less than two years and makes Kentucky the largest school system in the U.S. on a cloud-based financial management system.

The Kentucky Department of Education (KDE) has been a Munis client for 18 years. KDE recommended its school districts migrate to a hosted Munis solution for numerous benefits, including:

- More reliable access and availability of Munis services compared to the individual districts' on-premise infrastructure, which had reached end-of-life and needed significant investment.
- Cost savings from transitioning infrastructure and software maintenance from the districts' IT teams to Tyler's focused, highly trained technicians who can more efficiently support the school districts' needs.
- Disaster-recovery services with redundancy and fail-over features that would be cost-prohibitive for school districts to achieve on their own with an on-premise solution.
- Tyler's evergreen policy, which ensures the districts will continue to have the most current version of Munis without disruption of business or relicensing costs.

"Kentucky is a national P-12 leader in cloud computing and has already successfully transitioned many services to the cloud, including statewide email, and we believe that migrating to a hosted Munis solution is the best investment of state dollars for the long term," said David Couch, associate commissioner for the Office of Knowledge, Information and Data Services. "By moving to Munis' cloud-based model, we're actually increasing reliability and capabilities for our school districts, while taking a lot of work off their IT staff. Cost reductions are a benefit of cloud-computing, but for Kentucky schools, our primary driver was increasing the reliability of services beyond what our aging on-premise infrastructure could provide. For 18 years, Munis has been a very good product for us, and we're excited about the cloud-based Munis model because it gives Kentucky schools an outstanding financial solution and infrastructure far into the future."

Of Kentucky's 174 school districts, the remaining Jefferson County Public Schools (JCPS) is working with Tyler on a migration plan, and will keep its more than 100,000 students and 6,400 teachers on its current, on-premise Munis system until the migration is complete.

"This project was a successful collaboration between Tyler, KDE and Kentucky school districts. Migrating approximately 10 districts per month in less than two years, and completing the project on time and on budget, is no small feat," said Richard E. Peterson Jr., president of Tyler's ERP & School Division. "The Kentucky Department of Education is truly a national P-12 leader in aggressively pursuing cloud-based solutions, and they're showing solid stewardship of the state's financial and human resources with the technology decisions they're making."

About Tyler Technologies, Inc.

Tyler Technologies (NYSE: TYL) is a leading provider of end-to-end information management solutions and services for local governments. Tyler partners with clients to empower the public sector — cities, counties, schools and other government entities — to become more efficient, more accessible and more responsive to the needs of citizens. Tyler's client base includes more than 11,000 local government offices in all 50 states, Canada, the Caribbean and the United Kingdom. Forbes has named Tyler one of "America's Best Small Companies" five times in the last six years. More information about Dallas-based Tyler Technologies can be found at www.tylertech.com.
